Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Customer Problem Statement:

Create a problem statement to understand the challenges faced by HR/Admin users while importing employee information into ServiceNow. The customer problem statement focuses on reducing manual data entry, avoiding duplicate employee records, and ensuring accurate and consistent employee information. By understanding these challenges, the team can provide an efficient solution using Import Sets and Transform Maps to insert new employees and update existing records based on Employee ID.

Example:

I am	**Who is the customer? What type of user manages employee information?**	**An HR/Admin user who manages employee information in ServiceNow**
I'm trying to	**What does the user want to achieve with the employee data?**	**Import employee details from a spreadsheet into ServiceNow**
but	**What problems or barriers occur during the import process?**	**Manually entering employee records is time-consuming and may cause duplicate or incorrect data**
because	**What is the root cause of these problems or barriers?**	**Employee information is maintained in spreadsheets and existing employees need to be identified using Employee ID**
which makes me feel	**What emotions does the customer experience because of these problems?**	**Frustrated and concerned about data accuracy and consistency**

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am an HR/Admin user	I'm trying to import employee information from a spreadsheet into ServiceNow	But manually entering every employee record takes time and effort	Because employee data is maintained in spreadsheets and needs to be transferred accurately	Which makes me feel frustrated and time-consuming.
PS-2	I am a ServiceNow administrator	I'm trying to update existing employee records and add new employees efficiently	But duplicate records or incorrect data may be created during import	Because existing employees need to be identified using a unique Employee ID	Which makes me feel concerned about data accuracy and consistency.
