Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Empathy Map Canvas:

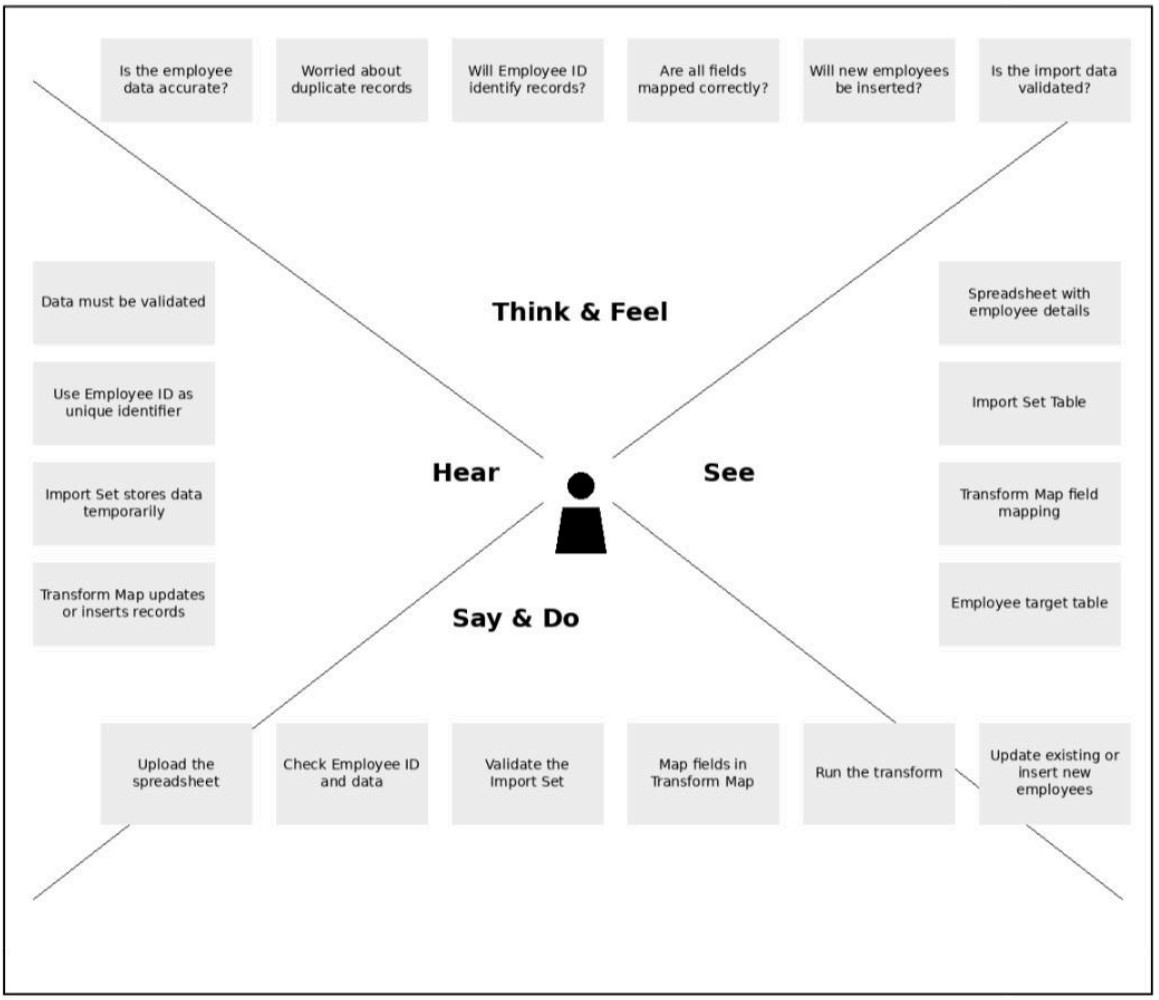

The Empathy Map Canvas helps us understand the HR/Admin user's experience while importing employee information into ServiceNow. It captures the user's thoughts, actions, feelings, and challenges during the data-import process.

Understanding the user's needs and difficulties helps the team identify problems such as manual data entry, duplicate records, incorrect information, and data inconsistency. This supports the development of an effective solution using Import Sets and Transform Maps, where existing employees can be identified using Employee ID and new employee records can be inserted accurately.

Example:

Example: Import Data using Transform Maps (Spreadsheet)

Pain

- Duplicate or incorrect employee records
- Invalid or incomplete spreadsheet data
- Incorrect field mapping

Gain

- Accurate employee data import
- Existing records updated automatically
- New employees inserted efficiently

Spreadsheet → Import Set Table → Transform Map → Employee Table
Employee ID identifies existing records for update; new Employee IDs create new records.
