Project Design Phase-II
Data Flow Diagram & User Stories

Date	3 October 2026
Team ID	6ab8c0438c7c66e7067306ef
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Data Flow Diagrams:

A **Data Flow Diagram (DFD)** is a visual representation of how data moves through a system. It shows where data comes from, how the system processes it, where it is stored, and where it goes next.

Example:

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
HR Administrator	Upload Employee Data	USN-1	As an HR administrator, I can upload an employee spreadsheet containing Employee ID, Name, Email, Department, and Location.	The spreadsheet is accepted when it contains the required employee fields and a supported file format.	High	Sprint-1
HR Administrator	Import Set Processing	USN-2	As an HR administrator, I can load the uploaded spreadsheet into an Import Set Table for temporary processing.	The spreadsheet rows are available in the Import Set Table, and the import status is visible.	High	Sprint-1

HR Administrator	Data Validation	USN-3	As an HR administrator, I can validate employee data before it is transferred to the Employee table.	Rows with missing or invalid required values are identified, and validation results are displayed.	High	Sprint-1
HR Administrator	Transform Map Configuration	USN-4	As an HR administrator, I can map spreadsheet fields to their corresponding fields in the Employee table.	Employee ID, Name, Email, Department, and Location are mapped to the correct target fields.	High	Sprint-1
HR Administrator	Update Existing Employees	USN-5	As an HR administrator, I can use Employee ID to identify and update existing employee records.	When an Employee ID matches an existing record, the corresponding Employee record is updated with the imported values.	High	Sprint-1

HR Administrator	Insert New Employees	USN-6	As an HR administrator, I can add employees whose Employee IDs do not already exist.	When an Employee ID has no matching record, a new Employee record is created.	High	Sprint-1
HR Administrator	Import Results	USN-7	As an HR administrator, I can review the results of an employee import.	The results show successful inserts, updates, and rows that could not be processed.	Medium	Sprint-2
HR Administrator	Error Handling	USN-8	As an HR administrator, I can identify and correct spreadsheet rows that fail validation or import.	Each failed row displays an error reason that helps me correct the data and retry the import.	Medium	Sprint-2
