Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Problem – Solution Fit Template:

Problem:

Manually entering employee information into ServiceNow is time-consuming and may cause duplicate records, incorrect data entry, and inconsistent employee details**.**

Solution:

The proposed solution uses Import Sets and Transform Maps to import employee information from a spreadsheet into the ServiceNow Employee table. The system temporarily stores the uploaded data in an Import Set Table, validates it, and then maps the fields to the target Employee table.

How it Solves the Problem:

- Reduces manual data entry and saves time.
- Uses Employee ID as a unique identifier to prevent duplicate records.
- Updates existing employee records and inserts new employees automatically.
- Improves data accuracy and consistency.

Purpose:

- ❑ Automate employee data import into ServiceNow.
- ❑ Reduce errors and duplicate employee records.
- ❑ Make employee data management faster, accurate, and reliable.
- ❑ Provide an easy and efficient way to maintain employee information.

Template:

ServiceNow Data Import Canvas – Project: Employee Information

Purpose/Vision: Automate Employee Data Import using Transform Maps

Prepare Source Data

1. SOURCE SPREADSHEET

Employee Details:
- Employee ID (Unique Key)
- Name
- Email
- Department
- Location

Stage and Validate

2. IMPORT SET TABLE

Temporary Staging Area
Stores raw data for processing & validation

Define Transformations

3. FIELD MAPPING - TRANSFORM MAP

Key Field Mapping:
- Source Email -> Target Email
- Source Name -> Target Name
...
(Full mapping details list)

Determine Coalesce

4. UNIQUE IDENTIFIER (KEY FIELD)

Match Field: Employee ID
Used to identify existing records

5. TRANSFORM MAP LOGIC

Business Rules & Scripts:
- Conditional Transformations
- Data Type Conversions

Cleanse Data

6. VALIDATION & DATA CLEANSING

Data Quality Checks:
- Check for duplicate Emails
- Validate Department names

Prevent Duplicates

7. DATA DE-DUPLICATION (COALESCE)

Action on Match:
If existing, update record

Load and Record

8. TARGET EMPLOYEE TABLE

Final Destination
- Record Insert/Update
- Success/Error Counts

Audit Import

9. IMPORT RESULTS & AUDIT TRAIL

Import Log:
- Records Processed
- Records Failed
- Update timestamps
