Project Design Phase
Proposed Solution Template

Date	3 October 2026
Team ID	6ab8c0438c7c66e7067306ef
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Manually entering employee information into ServiceNow is time-consuming and can lead to data entry errors, duplicate records, and inconsistent employee details.
2.	Idea / Solution description	The solution imports employee information from a spreadsheet using Import Sets and Transform Maps. The data is temporarily stored in an Import Set Table, validated, and mapped to the Employee table. Employee ID is used to identify existing employees and update their records, while new employees are inserted as new records.
3.	Novelty / Uniqueness	The solution automates employee data management using spreadsheet-based import, field mapping, validation, and unique Employee ID matching. This reduces manual work and helps maintain accurate employee records.
4.	Social Impact / Customer Satisfaction	It saves time for employees and administrators, reduces data-entry errors, avoids duplicate records, and provides reliable employee information. This improves user experience and customer satisfaction.
5.	Business Model (Revenue Model)	The solution can be implemented as part of a ServiceNow-based enterprise service. Organizations can reduce administrative effort and operational costs through automated employee data management.
6.	Scalability of the Solution	The solution can handle increasing numbers of employee records by importing larger spreadsheets. It can also be extended to other employee-related data and integrated with HR systems or other data sources.
