Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Project Overview:

Project Name: Import Data using Transform Maps (Spreadsheet)

Project Description: The spreadsheet is used to import employee information into ServiceNow using Import Sets and Transform Maps. It contains employee details such as Employee ID, Name, Email, Department, and Location. The uploaded spreadsheet data is first stored in an Import Set Table for temporary processing and validation. A Transform Map is then used to map these fields to the corresponding fields in the target Employee table. The system uses Employee ID as the unique identifier to identify existing employees and update their records, while new employees are inserted as new records.

Project Version: 1.0

Testing Period: 05 Oct 2026 to 24 Oct 2026

Testing Scope:

Features and Functionalities to be Tested:

- Spreadsheet upload
- Import Set Table data storage
- Employee data validation
- Transform Map field mapping
- Employee ID matching
- Existing record update
- New record insertion
- Error handling

User Stories/ Requirements to be Tested:

- USN-1: Upload employee spreadsheet
- USN-2: Store data in Import Set Table
- USN-3: Map spreadsheet fields using Transform Map
- USN-4: Validate employee data
- USN-5: Update existing employee records using Employee ID
- USN-6: Insert new employee records

Testing Environment:

URL/Location: ServiceNow Development Instance

Credentials: srimugij@gmail.com (ServiceNow)

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Spreadsheet Upload	1. Open Import Set. 2. Select employee spreadsheet. 3. Upload the file.	Spreadsheet is uploaded successfully.	Spreadsheet uploaded successfully.	Pass
TC-002	Import Set Table Validation	1. Open Import Set Table. 2. Check imported employee records.	Employee data is stored correctly.	Data stored correctly.	Pass
TC-003	Transform Map Field Mapping	1. Run Transform Map. 2. Check Employee ID, Name, Email, Department and Location.	Fields are mapped to the correct Employee table fields.	Fields mapped correctly.	Pass
TC-004	Existing Employee Update	1. Import an existing Employee ID. 2. Modify employee details. 3. Run transformation.	Existing employee record is updated.	Record updated successfully.	Pass
TC-005	New Employee Creation	1. Import a new Employee ID. 2. Run transformation. 3. Check Employee table.	A new employee record is created.	New record created successfully.	Pass
TC-006	Invalid Data Handling	1. Upload spreadsheet with invalid/missing	Invalid data is identified and an error is	Invalid data identified successful	Pass

		data. 2. Run transformation.	shown	ly.	

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Invalid Employee ID causes record import failure.	1. Upload spreadsheet with an invalid Employee ID. 2. Run the Transform Map. 3. Check the import result.	Medium	Closed	Validation was checked and invalid data was handled correctly.
BG-002	Missing required employee field causes transformation error.	1. Upload spreadsheet with a missing required field. 2. Run the transformation. 3. Check the error message.	Medium	Closed	Required fields should be checked before transformation.
BG-003	Incorrect field mapping displays employee information in the wrong field.	1. Configure an incorrect field mapping. 2. Run the Transform Map. 3. Check the Employee table.	High	Closed	Field mapping was corrected and verified.

Notes:

- All test cases cover both positive and negative scenarios.
- Testing feedback and suggestions for improvement have been recorded.

- Bugs are tracked with severity, status, and steps to reproduce.
- All major functionalities of the Import Set and Transform Map have been tested and verified.
